Art Unit 2615

Attorney Docket No. 2950-0149P
Amendment filed July 7, 2004
Response to final Office Action of April 7, 2004

Page 2 of 21

Amendments to the Claims

1. (Currently Amended) A method for creating and recording

search information for recorded digital data streams, comprising the steps

of:

recording a received digital data stream by grouping the received

digital data stream into stream object units, with each stream object unit

having a predetermined length;

creating and recording time information for said each stream

object unit, the time information being used to search for said stream

object units; and

creating and recording index information for pointing to the start

position of each stream object, which corresponds to the first stream

object unit of each stream objectthe location on the time information for

each stream object as management information for stream objects, each

stream object consisting of a predetermined number of stream object

units.

2. (Currently Amended) The A method set forth in claim 1, wherein

said time information is the length of each stream object unit, expressed

in terms of a count value counted at a constant interval.

Art Unit 2615

Attorney Docket No. 2950-0149P
Amendment filed July 7, 2004
Response to final Office Action of April 7, 2004

Response to final Office Action of April 7, 2004

Page 3 of 21

3. (Currently Amended) TheA method set forth in claim 2, wherein

said count value is a number incremented by 1 for each successive

constant interval.

4. (Currently Amended) The Amethod set forth in claim 1, wherein

said index information is in the order of on said time information of a time

information entry related to each stream object.

5. (Currently Amended) The Amethod set forth in claim 4, wherein

said index information is in the order of on said time information of a time

information entry corresponding to a first stream object unit of each

stream object.

6. (Currently Amended) The method for creating and recording

search information for recorded digital data streams, comprising the steps

of:

recording time information on the count value counted at a

constant interval for each stream object unit, with each stream object

unit consisting of transport streams; and

recording index information for pointing to the start position of

each stream object, which corresponds to the first stream object unit of

each stream objectthe location on said time information for the start

Art Unit 2615

Attorney Docket No. 2950-0149P Amendment filed July 7, 2004 Response to final Office Action of April 7, 2004

Page 4 of 21

position of each stream object, each stream object consisting of one or

more stream object units.

7. (Currently Amended) The Amethod set forth in claim 6, wherein

said count value is a number incremented by 1 for each successive

constant interval for a stream object unit.

8. (Currently Amended) The Amethod set forth in claim 6, wherein

said index information is in the order of on said time information of a time

information entry related to each stream object.

9. (Currently Amended) The method set forth in claim 8, wherein

said index information is in the order ofon said time information of a time

information entry corresponding to a first stream object unit of each

stream object.

10. (Currently Amended) A method for searching recorded digital

data streams, comprising the steps of:

(a) reading search time information for stream object units, each

stream object unit consisting of a plurality of digital transport streams

and the search time information being the length of each stream object

unit, expressed in terms of a count value counted at a constant interval;

Art Unit 2615

Attorney Docket No. 2950-0149P Amendment filed July 7, 2004 Response to final Office Action of April 7, 2004

Page 5 of 21

(b) detecting a stream object containing a requested search time by comparing the requested search time with start time information of each stream object consisting of a predetermined number of stream object units, the start time information having been recorded for accessing the stream objects;

- (c) reading index information pointing to the start position of each stream object, which corresponds to a first stream object unit of each stream object location on the search time information for a start position of the detected stream object; and
- (d) accessing a time information entry corresponding to said read index information.
- 11. (Currently Amended) The A method set forth in claim 10, further comprising the step (e) of accumulating search time from the accessed time information entry to a time information entry corresponding to the stream object unit containing the requested search time.
- 12. (Currently Amended) The method set forth in claim 11, wherein said step (e) compares the accumulated search time with the requested search time and determines the position corresponding to the

Art Unit 2615

Attorney Docket No. 2950-0149P Amendment filed July 7, 2004 Response to final Office Action of April 7, 2004 Page 6 of 21

requested search time based upon the comparison result.

13. (Currently Amended) TheA method set forth in claim 12,

further comprising the step (f) of reproducing the recorded digital data

stream from the determined position.

14. (Currently Amended) The method set forth in claim 10,

wherein said index information is in the order of on said search time

information of a first time information entry corresponding to the detected

stream object.

15. (Currently Amended) An apparatus for creating and recording

search information for recorded digital data streams, comprising:

recording means for recording a received digital data stream by

grouping the received digital data stream into stream object units and for

creating and recording time information for each stream object unit for

searching for the recorded stream object units, with each stream object

unit having a predetermined length; and

control means for creating index information for pointing to the

start position of each stream object, which corresponds to a first stream

object unit of each stream object the location on the time information for

each stream object as management information for the stream object and

Art Unit 2615

Attorney Docket No. 2950-0149P Amendment filed July 7, 2004 Response to final Office Action of April 7, 2004

Page 7 of 21

controlling said recording means to record said index information, each

stream object consisting of one or more stream object units.

16. (Currently Amended) TheAn apparatus set forth in claim 15,

wherein said time information is the length of each stream object unit,

expressed in terms of a count value counted at a constant interval.

17. (Currently Amended) TheAn apparatus set forth in claim 15,

wherein said index information is in the order of on said time information

of a time information entry corresponding to a first stream object unit of

each stream object.

18. (Currently Amended) An apparatus for reproducing recorded

digital data streams, comprising:

reading means for reading search time information for stream

object units, each stream object unit consisting of a plurality of digital

transport streams and the search time information being the length of

each stream object unit expressed in terms of a count value counted at a

constant interval; and

control means for detecting a stream object containing a requested

search time by comparing the requested search time with start time of

each stream object consisting of one or more stream object units, and

Art Unit 2615

Attorney Docket No. 2950-0149P Amendment filed July 7, 2004 Response to final Office Action of April 7, 2004

Page 8 of 21

controlling said reading means to read the index information pointing to

the start position of each stream object, which corresponds to a first

stream object unit of each stream objectthe location on the search time

information for the start position of the detected stream object, and

moving the data reproducing position of said reading means to access a

time information entry corresponding to said read index information,

wherein information on the start time of each stream object has been

recorded for accessing stream objects.

19. (Currently Amended) An apparatus for creating and recording

search information for recorded digital data streams, comprising:

a data formatter to group a received digital data stream into

stream object units and to create time information for each stream object

unit for searching for the stream object units individually, wherein each

stream object unit has a predetermined length;

a data recorder to record the digital data stream grouped by and

the time information created by said data formatter; and

a controller to create index information for pointing to the start

position of each stream object, which corresponds to a first stream object

unit of each stream object the location on time information created by

said data formatter as management information for the stream object and

Art Unit 2615

Attorney Docket No. 2950-0149P Amendment filed July 7, 2004

Response to final Office Action of April 7, 2004

Page 9 of 21

to control said data recorder to record the created index information;

wherein each stream object consists of one or more stream object units.

20. (Currently Amended) An apparatus for reproducing recorded

digital data streams, comprising:

a pickup to read recorded stream object units and search time

information for the stream object units, each stream object unit

consisting of a plurality of digital transport streams and the search time

information being the length of each stream object unit expressed in

terms of a count value counted at a constant interval;

a data analyzer to detect a stream object read by said pickup

containing a requested search time by comparing the requested search

time with start time of each stream object consisting of one or more

stream object units; and

a controller to control said pickup to read the index information pointing

to the start position of each stream object, which corresponds to a first stream

object unit of each stream object the location on the search time information

read by said pickup for the start position of the stream object detected by said

data analyzer, and to move the data reproducing position of said pickup to

Art Unit 2615

Attorney Docket No. 2950-0149P Amendment filed July 7, 2004 Response to final Office Action of April 7, 2004 Page 10 of 21

access a time information entry corresponding to the index information read by said pickup, wherein information on the start time of each stream object has been recorded for accessing stream objects.
